

Revolutionizing Home Services through Smart Digitization

Yuval Harel | Or Cohen

The Two-Sided Market Problem

THE CUSTOMER

54%  **Struggle to find reliable professionals**

- Unclear arrival times.
- Lack of pricing transparency.
- Difficulty comparing professionals.

43%  **Report stress during home repair processes.**

- Difficulty identifying the actual problem
- Poor communication and updates
- Risk of unnecessary costs and delays

THE PROFESSIONAL

₪600  **Compensation Risk**

- Israeli law penalizes severe technician delays.
- Poor scheduling creates financial losses.
- Missed appointments damage customer trust.

75%  **Of home service businesses invest in paid digital advertising.**

- Competition for visibility is increasing.
- Customer acquisition is expensive.
- Marketing costs reduce profitability.

The Two-Sided Market Solution

For Customers

AI-Based Issue Classification:

Understand the problem before booking a professional

Smart Booking:

Book professionals instantly or schedule appointments in advance

Real-Time Updates:

Receive status updates and track appointment progress

Transparent Price Lists:

Compare professionals using visible starting prices

For Professionals

Pre-Classified Service Requests:

Receive requests with clearer issue descriptions

Smart Scheduling:

Manage immediate and future bookings efficiently

Automated Updates & Coordination:

Reduce manual communication with customers

Reduced Advertising Dependency:

Generate leads without relying solely on paid advertising

Key Features

AI Issue Classification

Describe the issue and upload photos to receive an AI-based assessment, helping customers identify the problem before booking.

Smart Booking System

Book professionals instantly or schedule future appointments based on availability and customer preferences.

Real-Time Updates

Receive live status updates throughout the service process, reducing uncertainty and improving communication.

SOS Service Requests

Quickly locate available professionals for urgent situations that require immediate assistance.

Professional Dashboard

Manage schedules, incoming requests, availability, and performance data from a single interface.

Pronto Platform Architecture

Pronto Platform Architecture

AI Integration & Development Support

Product Features

AI Issue Classification

Using the OpenAI API, the system processes customer-provided text and images to classify service issues and improve professional matching accuracy.

Development Support

UI Development

Claude Code will be used during development to assist with UI implementation, frontend components, layout generation, and interface refinement.

Prototyping

Lovable was used to prototype key system screens and workflows, helping shape the product design before development.

Testing & Documentation

Testing

- Generate test scenarios
- Identify potential edge cases
- Validate user flows

Documentation

- Assist in creating project documentation
- Support presentation preparation
